DIGICLIM NG

CONCEPT

Management more effective and ergonomic of your farm ventilation.

Asserva specializes in managing the ambiance of livestock buildings.

The new DIGICLIM case and its various sensors allow precise control of ventilation, heating, and the quality of the atmosphere in which your animals evolve.

Temperature : Digiclim NG controls indoor and outdoor temperature in livestock buildings. The setpoint temperature is programmable and adaptable for every room.

Hygrometric sensor: this sensor, installed in option, detect a decreases in atmosphere quality and immediatelly fix.

CO2 sensor : with the CO2 sensor it is possible to measured the CO2 volume in a room and fixes it immediately to keep an ideal ambient for the animals.

Ammoniac sensor

Rooms control : new: Digiclim NG controls the electric consumption of a room with an electric meter. It's possible to connect the water meter and have the electric consumption for each room.

Water spray : Digiclim NG ensure you the water spray management and it's programmable by room.

MANAGEMENT OF LIVESTOCK VENTILATION

The new Digiclim NG has an entirely tactile interface, designed to be convenient.

Digiclim NG can be managed on PC, smartphone and tablet. It is entirely compatible with the previous Digiclim.

Management of room and spot heating and alerts.

New : Digiclim NG controls the electrical consumption, also manage the soaking system without any additional equipment and water consumption.
