## CONCEPT

### Sorting Station with animals weighing. Effective solution to manage fattening pigs in large group

Designed to manage fattening pigs in large group, the Ordusat system enables to measure the weight of the pigs each time they pass through the scale. The controller on the scale rapidly detects and stores the weight of each animal as it moves to the right feeding area.

The station will send the animal to the right feeding space (dry or wet ) according to their weight (growers and finishers).

At the end of the batch, Ordusat automatically sorts the pigs that reached the weight requirements defined by slaughterhouse.

Cage weighed and arch of entry to limit access

Weighing system on the top of ordisat concept (convenient access)

Adjustable anti-return gates and anti-sleeping bar

## SORTING STATION FOR FATTENING PIGS

Sorts Automatically the animal's ready for slaughterhouse.

Daily growth monitoring.

Savings on time and labour (wash rooms).

Savings building area to 10% vs Traditional. (Streamline of living space.)

Increased and centralized surveillance of animal growth.

Exemple for 4000 fattening	 Cleaning Time	 Selection Time	 Control Time
Traditionnal system	8 h	4 h	10 h
Ordisat system	3 h	1 h	5 h
Time saved	5h per week save more than 50%	3h per week save more than 70%	5h per week save more than 50%
